

Glancing over an athletic handbook the other day we could not help noticing the surprising measurements attributed to several athletes. The compilers can hardly be blamed for figures supplied them by

Measurements. individuals, but it looks as though more care is needed on the part of athletes when taking measurements. Of course, height has a lot to do with the measurements of athletes of the same weight, and even where both height and weight are similar there may be considerable difference in measurements, owing to variations in bone structure. Still, when one reads of a chest measurement exceeding 40in. on a frame of 8st. odd, it gives rise to curiosity as to what manner of youths these can be.
