

Among the Readers' Experiences in our last issue, Mr. Fred Wiggins, jun., stated that he would like to hear of anyone of his own age and weight who could equal his feats of strength in the way of doubling up a $\frac{5}{16}$ ths of an inch French nail, inside of five seconds. He has not had to wait long to be accommodated, for a correspondent, who signs himself E. B. S., of Manchester, wrote on the 1st of last month to state that he could perform the above feat with ease. And that, in addition he could double up a nail $\frac{3}{8}$ ths of an inch thick, walk round a platform, supporting a weight of 416lbs. (Size of platform not specified). Besides the above he can press a 56lbs. weight eight times from the shoulder with one hand. When it is added that E. B. S. is only 17 years of age and weighs only 10 stone, it will be readily recognised, that he has every prospect of a very remarkable career in the future. I only regret that he should not have sent me his photograph for insertion.
